## Codes for Pest Organisms

### Leafy vegetables

Lettuce

Spinach

### Fruity vegetables

Sweet pepper

Tomato

Melon

Watermelon

Squash

Pumpkin

Rootstock

### Herbs

Parsley

Rucola

## Leafy vegetables | Lettuce

### Codes for pest organisms in lettuce

Scientific name pathogen ISF	English name	Code	Races/Strains	Level of resistance	Remark
Viruses					
Lettuce mosaic virus	Lettuce mosaic	LMV	1	IR	LMV:1
Tomato bushy stunt virus	Lettuce die-back	TBSV		HR	
Bacteria					
Rhizorhapis suberifaciens (ex Sphingomonas suberifaciens)	Corky root	Rs (ex Ss)		IR	
Fungi					
Bremia lactucae	Downy mildew	ВІ	29-41EU	HR	In USA called BI:1-9US
Fusarium oxysporum f.sp. lactucae	Fusarium wilt	Fol	1	IR/HR	
Fusarium oxysporum f.sp. lactucae	Fusarium wilt	Fol	2	IR/HR	
Fusarium oxysporum f.sp. lactucae	Fusarium wilt	Fol	4	HR	
Insects					
Macrosiphum euphorbiae	Potato aphid	Me		IR	
Nasonovia ribisnigri	Lettuce leaf aphid	Nr	0	HR	
Pemphigus bursarius	Lettuce root aphid	Pb		HR	
HR: High Resistance   IR: Intermediate Resi	stance				

### Schedule 2 - Resistance

### 1. - Terminology and definitions

- a. 'Immunity' means not subject to attack or infection by a specified pest or pathogen.
- b. 'Resistance' is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest of pathogen pressure. Two levels of resistance are defined:
  - I. High resistance (HR): plant varieties that highly restrict the growth and development of the specified pest or pathogen under normal pest or pathogen pressure when compared to susceptible varieties. These plant varieties may, however, exhibit some symptoms or damage under heavy pest or pathogen pressure.
  - II. Intermediate resistance (IR): plant varieties that restrict the growth and development of the specified pest or pathogen, but may exhibit a greater range of symptoms or damage compared to highly resistant varieties. Intermediately resistant plant varieties will still show less severe symptoms or damage than susceptible plant varieties when grown under similar environmental conditions and/or pest or pathogen pressure.
- c. 'Susceptibility' is the inability of a plant variety to restrict the growth and development of a specified pest or pathogen.

#### 2. - Information per variety

Resistances in varieties of our crops will be coded (see coding list at www.enzazaden.com), unless indicated otherwise. In case a variety is resistant to more than one pathogen, the individual resistance codes will be separated by the symbol '/'.

If in a resistance code of a certain variety reference is made to certain strains for which the resistance is claimed this means that no resistance is claimed to other strains of the same pathogen.

## Leafy vegetables | Spinach

### Codes for pest organisms in spinach

Scientific name pathogen ISF	English name	Code	Races/Strains	Level of resistance	Remark		
Viruses							
Cucumber mosaic virus	Cucumber mosaic	CMV		HR			
Fungi							
Albugo occidentalis	White rust	Ao		IR			
Cladosporium variabile	Leaf Spot	Cv		IR			
Colletotrichum dematium	Anthracnose	Cd		IR			
Peronospora farinosa f.sp. spinaciae (now Peronospora effusa)	Downy mildew	Pe	1-19	HR			
HR: High Resistance   IR: Intermediate Resistance							

### Schedule 2 - Resistance

### 1. - Terminology and definitions

- a. 'Immunity' means not subject to attack or infection by a specified pest or pathogen.
- b. 'Resistance' is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest of pathogen pressure.

Two levels of resistance are defined:

I. High resistance (HR): plant varieties that highly restrict the growth and

- I. High resistance (HR): plant varieties that nighly restrict the growth and development of the specified pest or pathogen under normal pest or pathogen pressure when compared to susceptible varieties. These plant varieties may, however, exhibit some symptoms or damage under heavy pest or pathogen pressure.
- II. Intermediate resistance (IR): plant varieties that restrict the growth and development of the specified pest or pathogen, but may exhibit a greater range of symptoms or damage compared to highly resistant varieties. Intermediately resistant plant varieties will still show less severe symptoms or damage than susceptible plant varieties when grown under similar environmental conditions and/or pest or pathogen pressure.
- c. 'Susceptibility' is the inability of a plant variety to restrict the growth and development of a specified pest or pathogen.

#### 2. - Information per variety

Resistances in varieties of our crops will be coded (see coding list at www.enzazaden.com), unless indicated otherwise. In case a variety is resistant to more than one pathogen, the individual resistance codes will be separated by the symbol '/'.

If in a resistance code of a certain variety reference is made to certain strains for which the resistance is claimed this means that no resistance is claimed to other strains of the same pathogen.

## Fruity vegetables | Pepper

## Codes for pest organisms in pepper

Scientific name pathogen ISF	English name	Code	Races/Strains	Level of resistance	Remark
Viruses					
Cucumber mosaic virus	Cucumber mosaic	CMV		IR	
Pepper mottle virus	Pepper mottle	PepMoV		HR	
Pepper yellow mosaic virus	Pepper yellow mosaic	PepYMV		HR	
Potato Y virus	Potato Y	PVY	0	HR	PVY:0
Potato Y virus	Potato Y	PVY	1	HR	PVY:1
Potato Y virus	Potato Y	PVY	1.2	HR	PVY:2
Tobacco etch virus	Tobacco etch	TEV		IR	
Tobamovirus group					
Tobamovirus (ToMV, TMV, PMMoV)	-	Tm	0	HR	Tm:0
Tobamovirus (ToMV, TMV, TMGMV, PMMoV)	-	Tm	0, 1	HR	Tm:0,1
Tobamovirus (ToMV, TMV, TMGMV, PMMoV)	-	Tm	0, 1, 1.2	HR	Tm:0-2
Tobamovirus (ToMV, TMV, TMGMV, PMMoV)	-	Tm	0, 1, 1.2, 1.2.3	HR	Tm:0-3
Tomato spotted wilt virus	Tomato spotted wilt	TSWV	0	IR	
Bacteria					
Xanthomonas campestris pv. vesicatoria (now Xanthomonas spp)	Bakteriel spot	Xcv (now X spp)	1	HR	
Xanthomonas campestris pv. vesicatoria (now Xanthomonas spp)	Bakteriel spot	Xcv (now X spp)	2	HR	
Xanthomonas campestris pv. vesicatoria (now Xanthomonas spp)	Bakteriel spot	Xcv (now X spp)	3	HR	
Xanthomonas campestris pv. vesicatoria (now Xanthomonas spp)	Bakteriel spot	Xcv (now X spp)	4	HR	
Xanthomonas campestris pv. vesicatoria (now Xanthomonas spp)	Bakteriel spot	Xcv (now X spp)	5	HR	
Xanthomonas campestris pv. vesicatoria (now Xanthomonas spp)	Bakteriel spot	Xcv (now X spp)	6	HR	
Xanthomonas campestris pv. vesicatoria (now Xanthomonas spp)	Bakteriel spot	Xcv (now X spp)	7	HR	
Xanthomonas campestris pv. vesicatoria (now Xanthomonas spp)	Bakteriel spot	Xcv (now X spp)	8	HR	
Xanthomonas campestris pv. vesicatoria (now Xanthomonas spp)	Bakteriel spot	Xcv (now X spp)	9	HR	
Xanthomonas campestris pv. vesicatoria (now Xanthomonas spp)	Bakteriel spot	Xcv (now X spp)	10	HR	
HR: High Resistance   IR: Intermediate Resista	ince				

## Fruity vegetables | Pepper

### Codes for pest organisms in pepper

Scientific name pathogen ISF	English name	Code	Races/Strains	Level of resistance	Remark
Fungi					
Phytophthora capsici	Buckeye fruit and root rot	Pc		IR	
Leveillula taurica (anamorph: Oidiopsis sicula)	Leveillula taurica	Lt		IR	
Nematode					
Meloidogyne arenaria	Root-knot	Ма		IR	Resistance can be adversely affected at elevated soil temperatures (>28°C)
Meloidogyne incognita	Root-knot	Mi		IR	Resistance can be adversely affected at elevated soil temperatures (>28°C)
Meloidogyne javanica	Root-knot	Мј		IR	Resistance can be adversely affected at elevated soil temperatures (>28°C)
Abiotic stress					
Cracking	-	Cr		Т	
Stip	-	St		Т	
HR: High Resistance   IR: Intermediate	Resistance				

### Schedule 2 - Resistance

### 1. - Terminology and definitions

- a. 'Immunity' means not subject to attack or infection by a specified pest or pathogen.
- b. 'Resistance' is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest of pathogen pressure. Two levels of resistance are defined:

### Schedule 2 - Resistance

### 1. - Terminology and definitions

- a. 'Immunity' means not subject to attack or infection by a specified pest or pathogen.
- b. 'Resistance' is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest of pathogen pressure. Two levels of resistance are defined:
  - I. High resistance (HR): plant varieties that highly restrict the growth and development of the specified pest or pathogen under normal pest or pathogen pressure when compared to susceptible varieties. These plant varieties may, however, exhibit some symptoms or damage under heavy pest or pathogen pressure.
  - II. Intermediate resistance (IR): plant varieties that restrict the growth and development of the specified pest or pathogen, but may exhibit a greater range of symptoms or damage compared to highly resistant varieties. Intermediately resistant plant varieties will still show less severe symptoms or damage than susceptible plant varieties when grown under similar environmental conditions and/or pest or pathogen pressure.
- c. 'Susceptibility' is the inability of a plant variety to restrict the growth and development of a specified pest or pathogen.

#### 2. - Information per variety

Resistances in varieties of our crops will be coded (see coding list at www.enzazaden.com), unless indicated otherwise. In case a variety is resistant to more than one pathogen, the individual resistance codes will be separated by the symbol '/ '.

If in a resistance code of a certain variety reference is made to certain strains for which the resistance is claimed this means that no resistance is claimed to other strains of the same pathogen.

## Solanaceous rootstock for pepper

### Codes for pest organisms in solanaceous rootstock for pepper

Scientific name pathogen ISF	English name	Code	Races/Strains	Level of resistance	Remark		
Tobamovirus group							
Tobamovirus (ToMV, TMV, PMMoV)	-	Tm	0	HR	Tm:0		
Tobamovirus (ToMV, TMV, TMGMV, PMMoV)	-	Tm	0, 1	HR	Tm:0,1		
Tobamovirus (ToMV, TMV, TMGMV, PMMoV)	-	Tm	0, 1, 1.2	HR	Tm:0-2		
Tobamovirus (ToMV, TMV, TMGMV, PMMoV)	-	Tm	0, 1, 1.2, 1.2.3	HR	Tm:0-3		
Fungi							
Phytophthora capsici	Buckeye fruit and root rot	Pc		IR			
Nematode							
Meloidogyne arenaria	Root-knot	Ма		IR	Resistance can be adversely affected at elevated soil tem- peratures (>28°C)		
Meloidogyne incognita	Root-knot	Mi		IR	Resistance can be adversely affected at elevated soil tem- peratures (>28°C)		
Meloidogyne javanica	Root-knot	Mj		IR	Resistance can be adversely affected at elevated soil tem- peratures (>28°C)		
HR: High Resistance   IR: Intermediate Resistance							

### Schedule 2 - Resistance

### 1. - Terminology and definitions

- a. 'Immunity' means not subject to attack or infection by a specified pest or pathogen.
- b. 'Resistance' is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest of pathogen pressure.

Two levels of resistance are defined:

I. High resistance (HR): plant varieties that highly resistance.

- I. High resistance (HR): plant varieties that highly restrict the growth and development of the specified pest or pathogen under normal pest or pathogen pressure when compared to susceptible varieties. These plant varieties may, however, exhibit some symptoms or damage under heavy pest or pathogen pressure.
- II. Intermediate resistance (IR): plant varieties that restrict the growth and development of the specified pest or pathogen, but may exhibit a greater range of symptoms or damage compared to highly resistant varieties. Intermediately resistant plant varieties will still show less severe symptoms or damage than susceptible plant varieties when grown under similar environmental conditions and/or pest or pathogen pressure.
- c. 'Susceptibility' is the inability of a plant variety to restrict the growth and development of a specified pest or pathogen.

#### 2. - Information per variety

Resistances in varieties of our crops will be coded (see coding list at www.enzazaden.com), unless indicated otherwise. In case a variety is resistant to more than one pathogen, the individual resistance codes will be separated by the symbol '/ '.

If in a resistance code of a certain variety reference is made to certain strains for which the resistance is claimed this means that no resistance is claimed to other strains of the same pathogen.

## Solanaceous rootstock for tomato

### Codes for pest organisms in solanaceous rootstock for tomato

Scientific name pathogen ISF	English name	Code	Races/Strains	Level of resistance	Remark		
Viruses							
Tomato mosaic virus	Tomato mosaic	ToMV	0	HR			
Tomato mosaic virus	Tomato mosaic	ToMV	1	HR			
Tomato mosaic virus	Tomato mosaic	ToMV	2	HR			
Tomato spotted wilt virus	Tomato spotted wilt	TSWV		IR			
Bacteria							
Ralstonia solanacearum	Bakteriel wilt	Rs		IR			
Fungi							
Passalora fulva (ex Fulvia fulva)	Leaf mold	Ff	А	HR			
Fulvia fulva (ex Cladosporium fulvum)	Leaf mold	Ff	В	HR			
Fulvia fulva (ex Cladosporium fulvum)	Leaf mold	Ff	С	HR			
Fulvia fulva (ex Cladosporium fulvum)	Leaf mold	Ff	D	HR			
Fulvia fulva (ex Cladosporium fulvum)	Leaf mold	Ff	Е	HR			
Passalora fulva (ex Fulvia fulva)	Leaf mold	Ff	F	HR			
Passalora fulva (ex Fulvia fulva)	Leaf mold	Ff	G	HR			
Passalora fulva (ex Fulvia fulva)	Leaf mold	Ff	Н	HR			
Passalora fulva (ex Fulvia fulva)	Leaf mold	Ff	I	HR			
Passalora fulva (ex Fulvia fulva)	Leaf mold	Ff	J	HR			
Fusarium oxysporum f.sp. lycopersici	Fusarium wilt	Fol	0	HR	In USA called Fol:1		
Fusarium oxysporum f.sp. lycopersici	Fusarium wilt	Fol	1	HR	In USA called Fol:2		
Fusarium oxysporum f.sp. lycopersici	Fusarium wilt	Fol	2	HR	In USA called Fol:3		
Fusarium oxysporum f.sp. radicis-lycopersici	Fusarium crown and root rot	For		HR			
Phytophthora infestans	Late blight	Pi		IR			
Verticillium dahliae	Verticillium wilt	Vd	0	HR	In USA called Vd:1		
Verticillium albo-atrum	Verticillium wilt	Va	0	HR	In USA called Va:1		
Pyrenochaeta lycopersici	Corky root rot	PI		IR			
HR: High Resistance   IR: Intermediate Resistance							

## Solanaceous rootstock for tomato

### Codes for pest organisms in solanaceous rootstock for tomato

Scientific name pathogen ISF	English name	Code	Races/Strains	Level of resistance	Remark	
Nematode						
Meloidogyne arenaria	Root-knot	Ма		IR	Resistance can be adversely affected at elevated soil tempe- ratures (>28°C)	
Meloidogyne incognita	Root-knot	Mi		IR	Resistance can be adversely affected at elevated soil tempe- ratures (>28°C)	
Meloidogyne javanica	Root-knot	Мј		IR	Resistance can be adversely affected at elevated soil tempe- ratures (>28°C)	
HR: High Resistance   IR: Intermediate Resistance						

### Schedule 2 - Resistance

### 1. - Terminology and definitions

- a. 'Immunity' means not subject to attack or infection by a specified pest or pathogen.
- b. 'Resistance' is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest of pathogen pressure. Two levels of resistance are defined:
  - I. High resistance (HR): plant varieties that highly restrict the growth and development of the specified pest or pathogen under normal pest or pathogen pressure when compared to susceptible varieties. These plant varieties may, however, exhibit some symptoms or damage under heavy pest or pathogen pressure.
  - II. Intermediate resistance (IR): plant varieties that restrict the growth and development of the specified pest or pathogen, but may exhibit a greater range of symptoms or damage compared to highly resistant varieties. Intermediately resistant plant varieties will still show less severe symptoms or damage than susceptible plant varieties when grown under similar environmental conditions and/or pest or pathogen pressure.
- c. 'Susceptibility' is the inability of a plant variety to restrict the growth and development of a specified pest or pathogen.

#### 2. - Information per variety

Resistances in varieties of our crops will be coded (see coding list at www.enzazaden.com), unless indicated otherwise. In case a variety is resistant to more than one pathogen, the individual resistance codes will be separated by the symbol '/ '.

If in a resistance code of a certain variety reference is made to certain strains for which the resistance is claimed this means that no resistance is claimed to other strains of the same pathogen.

## Herbs | Basil

### Codes for pest organisms in basil

Scientific name pathogen ISF	English name	Code	Races/Strains	Level of resistance	Remark	
Fungi						
Fusarium oxysporum f. sp. basilicum	Fusarium Wilt	Fob		IR		
Peronospora belbahrii	Downy mildew	Pb		IR		
HR: High Resistance   IR: Intermediate Resistance						

### Schedule 2 - Resistance

### 1. - Terminology and definitions

- a. 'Immunity' means not subject to attack or infection by a specified pest or pathogen.
- b. 'Resistance' is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest of pathogen pressure. Two levels of resistance are defined:
  - I. High resistance (HR): plant varieties that highly restrict the growth and development of the specified pest or pathogen under normal pest or pathogen pressure when compared to susceptible varieties. These plant varieties may, however, exhibit some symptoms or damage under heavy pest or pathogen pressure.
  - II. Intermediate resistance (IR): plant varieties that restrict the growth and development of the specified pest or pathogen, but may exhibit a greater range of symptoms or damage compared to highly resistant varieties. Intermediately resistant plant varieties will still show less severe symptoms or damage than susceptible plant varieties when grown under similar environmental conditions and/or pest or pathogen pressure.
- c. 'Susceptibility' is the inability of a plant variety to restrict the growth and development of a specified pest or pathogen.

#### 2. - Information per variety

Resistances in varieties of our crops will be coded (see coding list at www.enzazaden.com), unless indicated otherwise. In case a variety is resistant to more than one pathogen, the individual resistance codes will be separated by the symbol '/'.

If in a resistance code of a certain variety reference is made to certain strains for which the resistance is claimed this means that no resistance is claimed to other strains of the same pathogen.

## Herbs | Parsley

### Codes for pest organisms in parsley

Scientific name pathogen ISF	English name	Code	Races/Strains	Level of resistance	Remark	
Fungi						
Septoria petroselini	Septoria blight	Sp		IR		
Plasmopara petroselini	Downy mildew	Рр		IR		
HR: High Resistance   IR: Intermediate Resistance						

### Schedule 2 - Resistance

### 1. - Terminology and definitions

- a. 'Immunity' means not subject to attack or infection by a specified pest or pathogen.
- b. 'Resistance' is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest of pathogen pressure. Two levels of resistance are defined:
